Typography

# Brand Fonts

Our type system combines two complementary fonts, Hubot Sans and Syne, to create a flexible yet cohesive visual language.

Hubot Sans is our primary brand font, used for main headlines and callouts. It is ideal for drawing attention and anchoring layouts.

Syne serves as our supporting font, bringing versatility and balance. It works seamlessly for subheadings, body copy, captions, and UI elements, ensuring readability across both print and digital applications.

# Approved Styles

The styles shown to the right are the approved brand typography styles. Only using these styles of the brand fonts ensures continuity and brand recognition across all touchpoints.

Note: Hubot Sans is a variable font meaning it contains multiple width styles. The Netwrix brand only uses the standard width styles shown here. Installing only the standard width fonts is advised and can be found here.

Typography

# Hierarchy

Our brand follows a defined typographic system to bring balance and structure to our content and layouts.

It's important to follow this system in order to establish order in content. By creating different sizes, shapes, and blocks of text, we can direct the user's eye to the information that needs attention or otherwise categorize that information visually. The following examples demonstrate our typographic hierarchy system, but should be intentionally altered depending on the size of the final application or the needs of the content.

### Topline

Style: Syne Medium
Size: Small
Case: Sentence Case
Tracking: 0

### Headlines

Style: Hubot Sans Regular
Size: Large
Case: Sentence Case
Leading: 100 to 115% of size
Tracking: 0

### Subtext / Subhead

Style: Syne Regular
Size: Medium
Case: Sentence Case
Leading: 125 to 135% of size
Tracking: 0

### Body

Style: Syne Regular
Size: Small
Case: Sentence Case
Leading: 130 to 140% of size
Tracking: 0

### Buttons

Style: Syne Medium
Size: Small

Our Vision

## Data security that starts with identity

You can't protect your data without securing the identities accessing it.

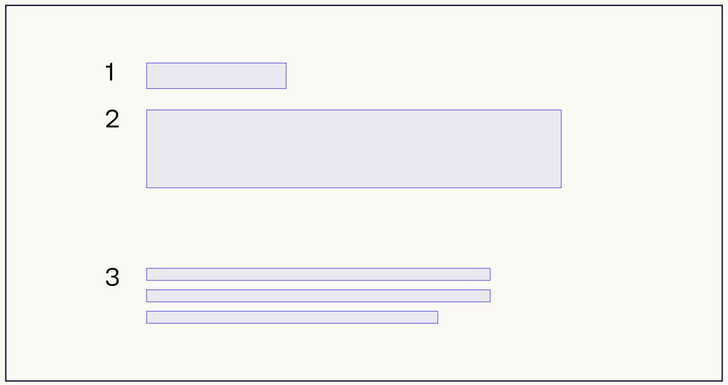
We know that true data security starts with identity. Designed by cybersecurity experts, we built the data and identity controls we wish we'd had. The result? Smarter solutions that secure data from the source.

Get Started

Typography

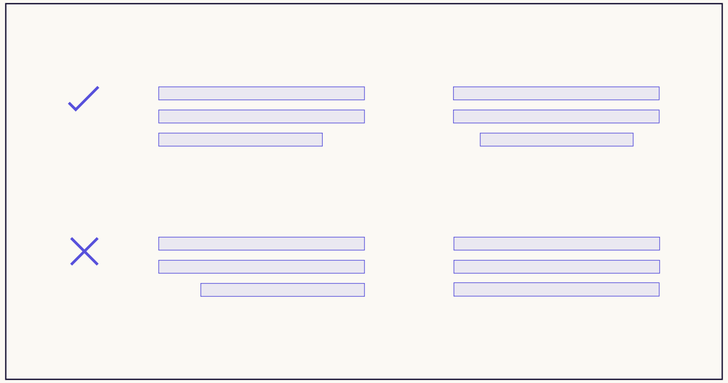
# Layout

Clear, structured typography ensures that communications feel professional, approachable, and easy to read.



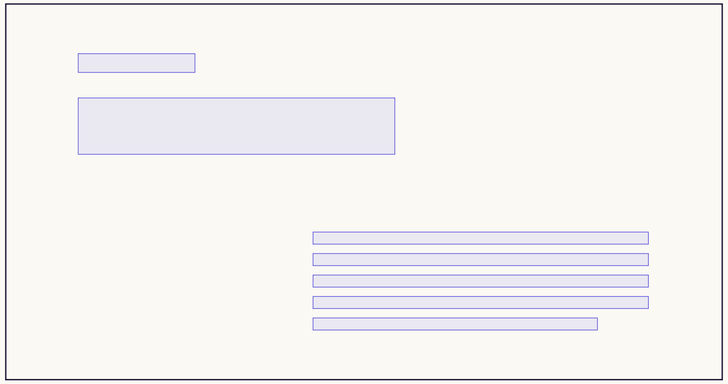
## Scale

- Use no more than three type sizes in a single layout to maintain clarity.
- Each size should increase by at least 25% from the previous one to establish a strong hierarchy.
- Lead with bold headlines in Hubot Sans and support with Syne for subheads and body text.



## Alignment

- Left-aligned text is our default for headlines, body copy, and supporting text.
- Center-aligned may be used sparingly for standout headlines or simple callouts.
- Avoid right alignment or full justification, as these reduce readability and create visual inconsistency.



## Composition

- Keep it simple: whitespace is as important as the text itself — let layouts breathe.
- Maintain consistency: use consistent margins and spacing across sections.
- Balance visuals and text: pair with grids, imagery, or gradients without crowding the message.

Typography

# Misuse

The examples shown here illustrate incorrect uses of typography.

1. Don’t mix styles
2. Don’t outline
3. Don’t use incorrect tracking or leading
4. Don’t right-align
5. Don’t apply effects
6. Don’t use unapproved typefaces
